Construction Comments

1960 BOND ELECTIONS 1

The unprecedented high volume of bond approvals in the 1960 November election prompts an analysis of the specific significance of the voting. The results indicate that public construction will in the years ahead contribute more than usual strength to over-all construction demand.

On the basis of returns for about three-fourths of the propositions, out of issues valued at \$3.4 billion put before the voters, a total of \$3.0 billion were approved—the highest volume of approvals for any November election. This 90-percent rate of approvals on the part of voters to finance further public improvements 11 percent greater than the November election average for 1946-59, signifies a clearcut willingness to incur heavier indebtness for long-term projects. Furthermore, the voters approved greater amounts of bond issues in 8 out of the 11 months in 1960 as compared to 1959. Apparently, the amount of indebtness acceptable to the public has not yet reached its limit.

The largest bond proposition submitted to the voters on election day, \$1.75 billion, was California's huge Feather River water and irrigation project. It was passed, but by a narrow margin on account of widespread opposition created by diverse conflicting interests in that State. However, the second largest block of bonds before the electorate, \$345 million of Illinois obligations intended for extending State university facilities and improving welfare institutions, passed by a substantial majority. Across the country, sewer and water, and education projects fared particularly well, 98 percent of the amount proposed for the former and 84 percent for the latter being approved.

Bond election approvals for 1960 are expected to reach a new peak of \$5.5 billion, almost double the \$2.8 billion for 1959 and considerably above the former record in 1956. Moreover, the November contribution to the total, 55 percent, is a somewhat larger proportion than is normally accounted for by the month, possibly attributable to the large vote brought out by the presidential contest.

¹Includes only municipal bonds in December. ²Includes only municipal bonds. ³Eleven-month actual data plus estimate for December based on average of 1946-59 December approvals.

For the first 11 months of 1960, 72 percent of the issues and 87 percent of the dollar volume up for voter approval passed, as compared to 74 percent of the issues but only 72 percent of the dollar amount in the corresponding period of 1959. School bond approvals, are running at a rate of \$1.4 billion for the first 11 months of 1960, up sharply from the \$1.0-billion level for the same period of 1959.

Because of the considerable time lag between voter approval and actual construction activity resulting from contract awards, 1961 activity will reflect mainly the influence of approvals during the late 1950's, which also ran at unusually high levels. Since 1952, the contract awards for State and local government construction have fairly consistently followed a pattern counter to the economic cycle, about percent of the awards being held back from the final stages of an upturn and being granted at a late period of decreased economic activity. However, this shift is less apparent in the work-put-in place series, owing to the rather long periods used for phasing out contract awards. Thus, the bond election picture for November and for 1960 as a whole tends to support the expectation that there will be a percent rise for public construction activity in 1961³ and continued gains in the period following.

^{&#}x27;Many of the statistics cited here are based on compilations prepared by the Investment Bankers Association, Washington, D. C.

sociation, Washington, D. C.

[&]quot;Outlook for 1961" in Construction Review, November 1960.

Expenditures for Maintenance and Repairs in 1959

Resuming the long-term climb that was interrupted in 1958, maintenance and repairs expenditures for all types of structures and facilities rose by 8 percent, to \$19.3 billion, in 1959.

Almost every category increased over 1958, but half of the overall dollar gain of almost \$1.5 billion was accounted for by rising expenditures for nonfarm residential buildings. This category, wherein expenditures for new construction also boomed in 1959, had outlays for maintenance and repairs of \$7.5 billion, \$700 million above the 1958 recession levels. However, because of rising costs, the physical volume of work performed probably did not exceed the \$7.4 billion mark of 1957. Because of the rising inventory of housing, spending for maintenance and repairs on a per unit basis was certainly less than in 1957.

The 1959 figures reflect outlays in all 50 States, whereas the statistics for previous years excluded Alaska and Hawaii. However, the data are readily comparable.

Spending on the maintenance of nonresidential buildings exceeded \$4 billion for the first time in 1959. Highways, increasing by slightly less than \$100 million to \$2.4 billion, has displaced the public utilities group as the third most important category. Within the public utility group, railroads, the fourth largest major group, increased only slightly, to just under \$1.3 billion. It is the only category that has not recovered fully from 1958 declines, from almost \$1.5 billion in 1957.

Estimates for years prior to 1950 and a decription of the methods used in deriving them appear in Construction Volume and Costs, 1915-1956: A Statistical Supplement to Construction Review, available from the Superintendent of Documents, Government Printing Office, Washington 25, D.C., for 55 cents. The data through 1957 are the same as those previously published; revisions were made only in the 1958 figures, which were preliminary at the time they were first released, as the 1959 figures are now.

Steel Heating Boiler Production—1959*

Shipments of residential-type steel heating boilers having capacities up to 350,000 British thermal units per hour (BTU/H) totaled 100,267 units in 1959, according to a survey of the industry conducted by the Building Materials Division of the Business and Defense Services Administration. The survey embraced the following products: steel heating and steel firebox commercial and residential boilers, including miniature, scotch, and vertical types and residential units fabricated from copper.

The data for 1957, the first year for which such a survey was conducted, showed boiler size in square feet of heating surface rather than in BTU/H net rating. Therefore, the statistics for 1957 and 1959 are not exactly comparable.

SHIPMENTS

Shipments in 1959 reported by 79 plants totaled 128,854 units (table 1). By comparison, shipments in 1957 amounting to 129,130 units were reported by 90

plants, 11 of which subsequently discontinued manufacture of boilers (table 2). The 1959 shipments were valued at \$82.5 million (table 3), contrasted with the 1957 value of \$83.5 million (revised).

Shipments of scotch-type boilers increased by 3,000 in 1959 over 1957. The 1957 statistics were collected on the basis of square feet of heating surface, the smallest category being 129 to 321 square feet. Manufacturers of scotch-type boilers having less than 129 square feet of heating surface probably reported such sizes in the residential category in the 1957 survey. Comparisons of data on vertical and other type boilers of 177 square feet of heating surface or less are also limited by the difference in the 1957 and 1959 forms. Information published in Simplified Practice Recommen-

.

The Building Materials Division is conducting a survey of each major segment of the heating equipment industry, using BTU/H as the measure of capacity. Manufacturers' shipments in 1959 of cast iron boilers of 0 to 349,000 BTU/H capacity totaled 206,931 units and steel heating boilers, residential type, of 0 to 350,000 BTU/H capacity totaled 100,267 units.

Table 5 gives a breakdown of steel heating boiler shipments in 1959, by Census geographic division destination.

¹CONSTRUCTION REVIEW, June 1960, p. 13.

OUTLOOK FOR 1961

Starts of single-family residences in 1961, based on the current rate, are not likely to exceed the 1960 total. Governmental action, however, may stimulate an increased rate in the final eight months of 1961. Apartment-house construction may increase somewhat in 1961, improving the outlook for the larger steel boilers. Steel boiler demand for other habitable construction, except industrial, should remain steady.

Repair, modernization, and rehabilitation outlays are expected to increase in 1961. This activity is substantial and appears to have been running at approximately \$25 billion annually, although no definitive figures are available to support this estimate. The Building Materials Division's survey of more than 10,000 heating equipment installers is nearing completion, and its results should provide considerable information on steel boilers in the replacement market.

Some industry sources are of the opinion that steel boiler sales in 1961 will approximate 1960

levels.

NOTE: The monthly estimates in Part A are determined primarily by past contract award movements, standard progress patterns, and assumed normal seasonal movements. Except when special surveys are undertaken, as was done during the 1959 steel strike, they do not reflect the effects of varying numbers of working days in given months, nor of special conditions influencing the volume of activity in any given month, such as unusual weather, materials shortages, overtime, work stoppages, and delays.

Source: Department of Commerce, Bureau of the Census. *1947-49 dollars. **Includes values for the "other" categories, not shown separately on this table. See table A-1. Data for 1959 and 1960 have been revised to reflect corrected estimates of fam construction. Change of less than one-half of 1 percent. Revised. NOTE: Values for 1955-1958, shown in italics, are not comparable with later data because they reflect the "new" housing starts series. While data for Alaska and Hawaii have been included in all series, the effect on national totals is negligible, being of the order of one-half of 1 percent.

aii.

NOTE: The statistics shown in italics in this section relate to the "old" housing starts series which was terminated with April 1960 data. The "new" series overlaps the "old" one for the period January 1959-April 1960.

A description of the "new" series and a statement regarding conceptual, coverage, and methodological changes which affect the comparability of the two series appears in CONSTRUCTION REVIEW, June 1960, pp. 4-10.

Source: Table compiled by Department of Commerce (BDSA) from data published by the Engineering News-Record. Data include only those projects with contract values above the following minimum sizes: Water supply, earthwork, and waterways-\$44,000; other public works-\$73,000; industrial buildings-\$93,000; other buildings-\$344,000. *Adjusted to 52 weeks.

Source: Department of Labor, Bureau of Labor Statistics.

1 These are basic scales representing minimum wage rates agreed upon through collective bargaining between employers and trade unions. Data on employer contributions to insurance (welfare) and pension funds, and for vacation and holiday payments are available upon request to the source agency.

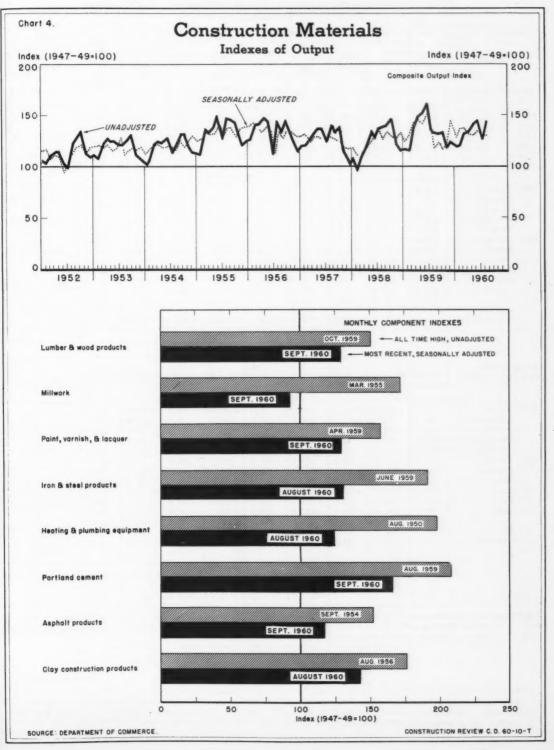

2 No union scale in effect on survey date.

3 Includes Rock Island and Moline, Ill., and Davenport, Iowa.

*Scale increase between July 1 and October 1, 1960.

*Scale decrease between July 1 and October 1, 1960.

Source: Department of Labor, Bureau of Labor Statistics. *For definitions, see Annual Supplement, Employment and Earnings, May 1960. These areas coincide generally with the standard metropolitan statistical areas defined by the Bureau of the Budget. Includes a small number of employees engaged in mining. Data for 1958 and 1959, shown in italics, are being revised in line with expanded area definitions and are not strictly comparable with those shown for 1960. Not yet available. Series have been temporarily discontinued. Includes data also shown separately for Jersey City, Newark, Paterson-Clifton-Passaic, and Perth Amboy, N. J., and Nassau-Suffolk, and Westchester Counties, N. Y.

U. S. DEPARTMENT OF COMMERCE FIELD OFFICES

PROVIDE READY ACCESS TO COMMERCE SERVICES

 The Department of Commerce maintains Field Offices in the cities listed below for the purpose of providing ready access to the reports, publications, and services of the Business and Defense Services Administration, Office of Business Economics, Bureau of Foreign Commerce, Office of Area Development, and the Bureau of the Census. Information on certain activities of the National Bureau of Standards and the Patent Office are also available.

 Experienced personnel will gladly assist in the solution of specific problems, explain the scope and meaning of regulations administered by the Department, and provide practical assistance in the broad field of domestic and foreign commerce. Field offices act as official sales agents of the Superintendent of Documents and stock a wide range of official Government publications relating to business. Each office maintains an extensive business reference library containing periodicals, directories, publications, and reports from official as well as private sources.

 Approximately 700 Chambers of Commerce, Manufacturers Associations, and similar business groups are official Cooperative Offices of the Department where many of the basic publications and reports of the Department are on file and available for consultation. If specific information is not on hand in the Cooperative Office, your problem will be referred to the nearest Department field office.

These facilities have been established to assist you. You are invited to use them.

DOMESTIC TRADE

Population Count and Characteristics; Housing Statistics; Detailed Agricultural Data on County Basis; Retail, Wholesale and Service Business; Estimates on Population Movements; National Income Statistics; Regional Trends in United States Economy; Biennial Volume on Business Statistics; Current Releases and Business Indicators; Research Sources on Market Potentials; Development and Maintenance of Markets: Reports on Governmental and Private Technical Research; Regional and Community Development Techniques; Information on Government Procurement, Sales and Contracts.
